

SHIPPING

INCREASE SHIPPING PRODUCTIVITY BY 50% OR MORE WITH ONPOINT CONNECT SHIPPING

If you ship via UPS and FedEx for orders originating from your Pressero storefront, Onpoint Connect Shipping software can increase the productivity of your shipping department by 50% or more. And our rate comparison feature can save you a bundle each month on shipping charges.

We support UPS, FedEx, USPS, DHL, company truck and local courier from a single, webbased interface.

FEATURES	BENEFITS
Web-based Software as a Service Model (SaaS)	No need for computing equipment or IT staff
Multi-carrier support	Ship UPS, FedEx, USPS, local carrier, and company truck from a single interface
Account-specific rates	Shows your contracted rates with each carrier
Integrated with your web2print storefront	No need to re-key shipment data
Backend storefront automation	Dynamically sends tracking numbers, triggers notifications, and updates order status to 'completed'
Easy job ticket lookup	Enter the job ticket and queue the scheduled shipment
Dynamic label printing	Supports leading label printers
Dynamic packing slips	Print packing slips from any printer

UP AND RUNNING IN LESS THAN 48 HOURS!

"Connect Shipping really saves us time. And time is money! We are doing more with less folks these days so the shipping automation really helps. Instead of having to retype and having shipper errors on our end it's really the end user's responsibility to make sure they input the correct shipping address information. As a result, we are saving money by eliminating bad shipments. And your folks have always been top notch and great to work with."

- DAVE HINKLEMAN, ATLANTA, GA

Onpoint Connect Shipping is integrated with your Pressero storefront so scheduled shipments flow directly into the shipping interface, eliminating the need to re-key shipping information. Simply scan your Pressero job ticket and you're ready to produce a label and packing slip. It's that easy!

At the end of the day, Onpoint Connect Shipping updates your Pressero storefront with tracking numbers. It triggers email notifications back to the end users, and changes the order status to 'shipped'. Our automated reporting feature eliminates the need for shipping personnel to update the dashboard manually.
